

## Emu Accelerates Solutions for:

- *Computational Biology*
- *DNA Sequencing Analysis*
- *Pathway to Personalized Medicine*
- *Multi-string Comparison & Matching*

## Emu Makes the “Intractable Tractable”

- *Built to tackle **Big Data** challenges*
- *Architecture designed for future **Exascale** computing*
- *Compute power, memory capacity, bandwidth, and software all scale simultaneously*
- *A new programming paradigm based on “**Migratory Threads**” and “**Memory-Side Processing**”*
- *10X more efficient than traditional HPC architectures in cost/performance, power, cooling, and footprint.*

## Emu wants to Partner!

*We are looking for premier bioscience partner(s) with strong HPC software development experience to help us create game-changing solutions for bioinformatics and genomics.*
